

FIRE/SMOKE DAMAGE

We make your emergency our first priority. Since 1989, Western Montana area property owners, building managers, and insurance adjusters have relied in Dayspring Restoration for efficient 24-hour response to fire and water damaged residential, commercial and industrial structures and contents.

Restoration Services Offered:

- ☀️ Emergency board-up and weatherization
- ☀️ Experienced tradesmen to provide full reconstruction
- ☀️ High speed drying and dehumidification
- ☀️ Ultrasonic contents cleaning
- ☀️ Electronics reclamation using ODELL technology
- ☀️ Sodium Bicarbonate Abrasive Resurfacing
- ☀️ Ozone treatments
- ☀️ Digital inventory and pack-out
- ☀️ Off site secure storage of contents

Fire, and the water damage that often accompanies it, can occur at any time in a commercial or residential property. When it does, you need reliable and effective cleanup help fast. The Dayspring team responds to your call right away - day or night - to provide an immediate job site assessment. We then begin emergency board-up and weatherization, clean-up, and salvage. Our work includes the removal of contaminated and unsalvaged building materials, as well as smoke, soot and water decontamination of the entire affected area.

The days and weeks following a fire are an emotional time full of uncertainty and disbelief. During this time decisions must be made that affect precious possessions and many people's largest asset, their home or business. Dayspring Restoration provides a wide variety of services to restore your belongings and home to a pre-loss condition. Methods based on years of experience and formal training include various repair and cleaning options with long-term results and value in mind. The team of professionals will also work with your insurance adjuster to develop the best plan of action to handle your project in the most efficient and effective manner possible.

Fire restoration is a highly specialized field that requires professional attention. Dayspring invests heavily in the latest equipment and materials to stay on the leading edge of restoration technology.

FIRE/SMOKE DAMAGE

Industry leaders with the most advanced technology.

Odell Electronics

For over 50 years Odell Electronics Cleaning Stations has been dedicated to providing safe, effective methods to clean electronic equipment and components. Since modified water is a part of the manufacturing process of most electronics, the most effective and proficient methods for cleaning them are water-based. Moderate pressure, aqueous spray cleaning systems and controlled drying chambers are our specialty.

Odell originally focused primarily on maintenance cleaning of electronics for such clients as the U.S. Navy, RCA, Hughes Aircraft, and NASA, before utilizing its expertise for the restoration industry.

"All in all, I am totally impressed – favorably – with their performance, integrity, skill, kindness, appearance and friendliness."
– Harold and Elizabeth G.

Ultrasound

Omegasonics uses the latest technology with ecologically safe, biodegradable cleaning agents to create the most positive cleaning force in today's society and for our future. Ultrasound works like this: Ultrasound is created by generators, which produce high frequency electricity. This high frequency electricity is then converted to mechanical energy or sound waves through a transducer, which literally makes these waves vibrate.

As these vibrating sound waves travel through water, microscopic bubbles form and repeatedly implode upon a given surface. This powerful action removes visible and even microscopic dirt particles making a dirty or greasy part cleaner than alternative methods. Not only is this ultrasonic cleaning method completely user-friendly and extremely effective, but it is fast, safe, and gentle.
